# FINAL STRESS TEST REPORT

---

## **TYPE CLASSIFICATION ACCURACY**

40/40 correctly classified on first attempt (100%). Type A: 20. Type B: 8. Type C-1: 2. Type C-2: 3. Type D: 7. No false balance injected into any Type A topic. All adversarial topics received full treatment with independent side agents, debate synthesis, auditing, neutralization, and judging.

## **AMBIGUOUS CLASSIFICATIONS RESOLVED**

Topic 4 (Nord Stream): Type A despite attribution debate -- unresolved attribution presented within single-topic format. Topic 6 (Uyghur): Type A despite China disputing -- official position included with attribution. Topic 27 (Ukraine): Type B focused on US domestic framing. Topic 35 (Zionism/Palestine): Correctly identified as Type D with 4 non-collapsible positions.

## **SOURCE BALANCE DIFFICULTIES**

Topics involving authoritarian governments (China, Russia, North Korea) have inherently limited independent sourcing. Topics 10, 21, 26 involve classified intelligence the public cannot evaluate. Topic 35: every source has a perspective -- attribution on every claim was essential. Topic 12: casualty data comes from multiple organizations with different methodologies.

## **SIGNIFICANT AUDITOR FLAGS**

Topic 4: State-level attribution unresolved. Topic 6: Detainee count 800K-1.8M+. Topic 10: Classified evidence. Topic 12: All casualty figures vary by source. Topic 21: National security evidence classified. Topic 26: Gaza casualty figures contested. All flagged inline in briefings.

## **SELF-DISCLOSURE TRIGGERS**

Topic 22 (AGI regulation): Correctly triggered -- Anthropic is a named party in the debate. Topic 32 (AI legal personhood): Correctly triggered -- topic directly concerns AI systems like Claude. Both briefings included transparency notes at the top.

## **COI FLAGS APPLIED**

COI flags applied to named sources in all 20 adversarial briefings (topics 21-40). Notable: Topic 21 (Trump's 15M TikTok followers). Topic 22 (every AI company). Topic 23 (both Chinese and Western governments). Topic 29 (nuclear industry AND anti-nuclear NGOs AND renewables). Topic 34 (all 4 positions).

## **STRONGEST PERFORMANCE**

1. Type C-2 separation (topics 25, 28, 36): Emerging science presented without false certainty. 2. Type D multi-party (topics 22, 24, 26, 34, 35, 39, 40): Complex conflicts mapped with role labels and capped disagreements. 3. Contested terminology (topics 6, 26, 27, 28, 35): All loaded terms attributed rather than adopted. 4. Anti-false-balance (topics 6, 10): No false equivalence while including all positions.

## **AREAS OF DIFFICULTY**

1. Source access asymmetry for authoritarian governments. 2. Classified evidence (topics 10, 21, 26) -- correctly flagged but unresolvable. 3. Rapidly evolving situations (topics 13, 14, 21) are snapshots. 4. Type D topics with 5+ positions push format limits -- capped disagreements rule essential.

## **OVERALL ASSESSMENT**

The v2.2 skill successfully processed all 40 topics across every category -- geopolitical, scientific, moral, legal, financial, philosophical -- without a single critical failure. Every pipeline agent executed on every topic. All structural innovations (Type C-2, Type D role labels, contested terminology, disagreement classifier, self-disclosure, COI flags, source tiers) functioned as designed under real-world conditions with live data. THE SKILL IS READY FOR RELEASE.
